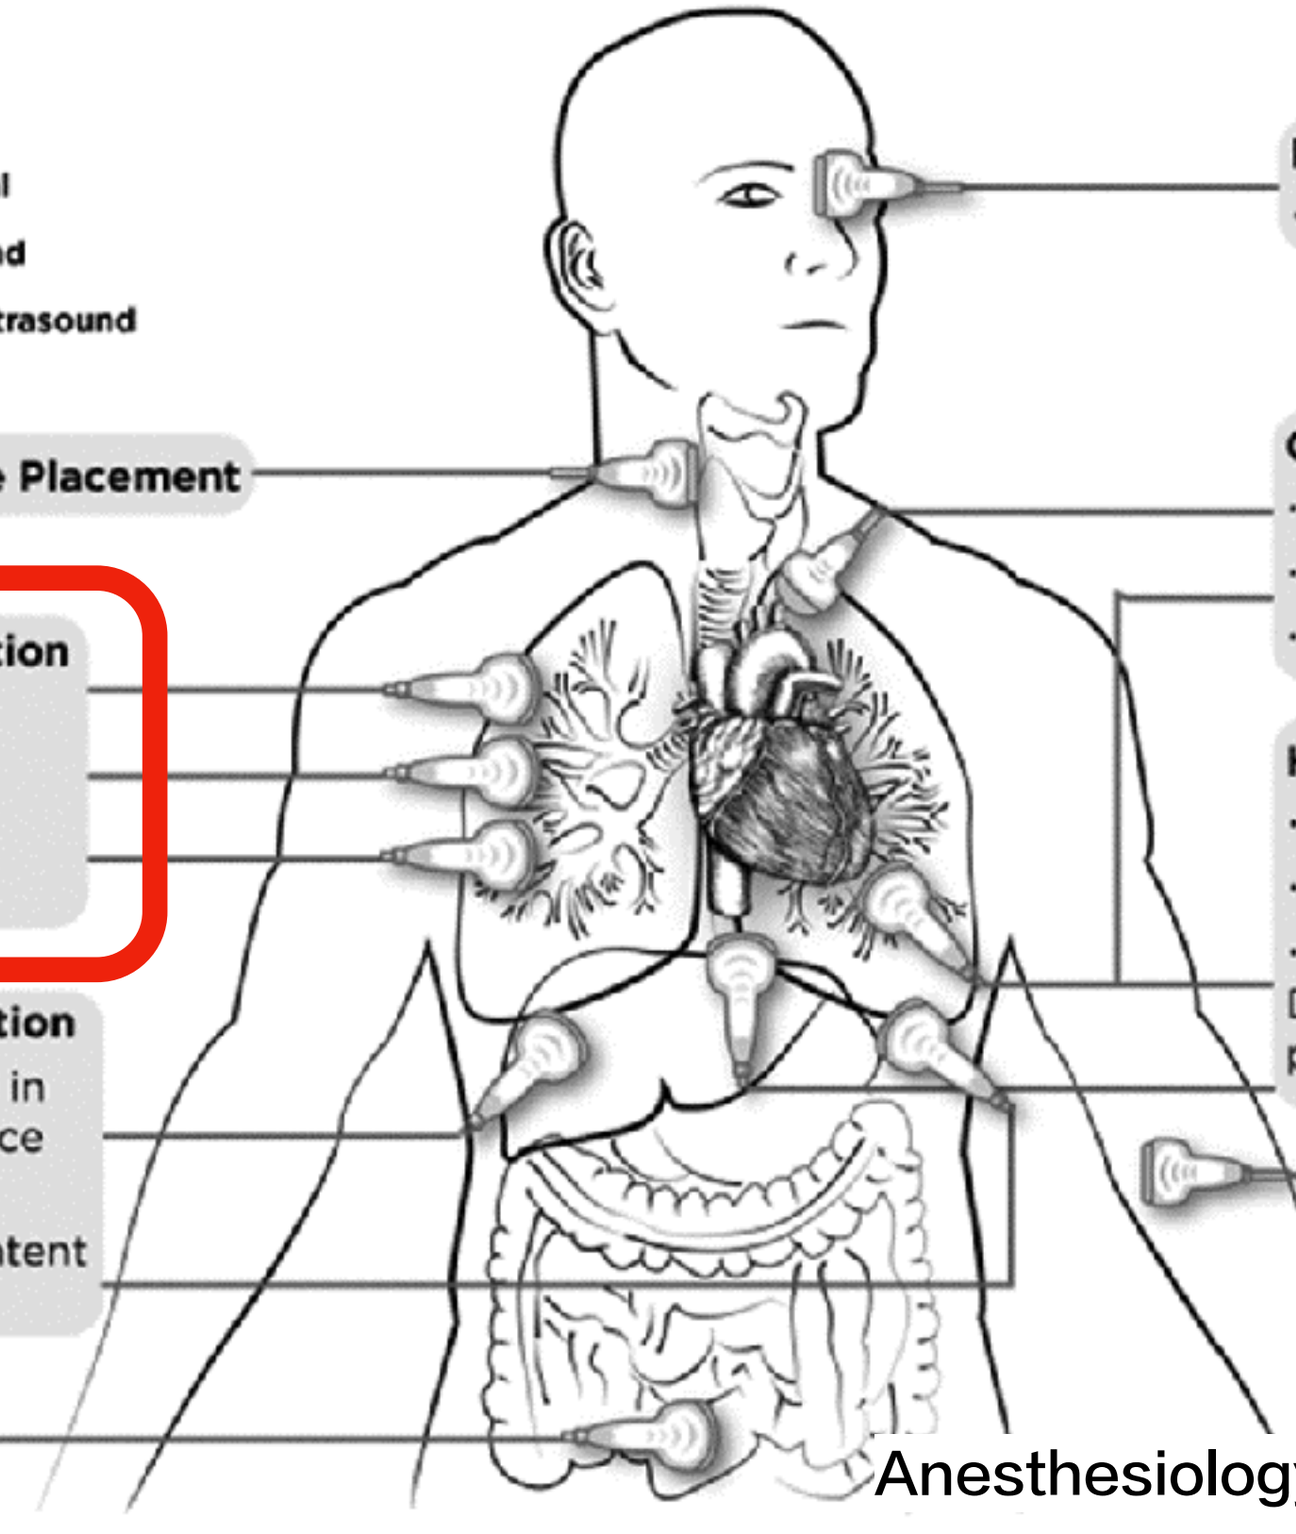
F.O.R.E.S.I.G.H.T. Comprehensive Perioperative Ultrasound Examination

Focused
Peri**O**perative
Risk
Evaluation
Sonography
Involving
Gastro-Abdominal
Hemodynamic, and
Trans-Thoracic Ultrasound



Endotracheal Tube Placement

Pulmonary Evaluation
- Pneumothorax
- Pleural effusion
- Severe alveolar interstitial disease

Abdominal Evaluation
- Evaluate free fluid in interperitoneal space via 3 windows
- Assess gastric content and volume

ICP Accessment
- Optic sheath diameter

Cardiac Evaluation
- R/L ventricular function
- Pericardial effusion
- Severe valvular abnormalities

Hemodynamics
- IVC collapsibility
- LV end diastolic area
- Respiratory variation on Doppler flow across LVOT/ peripheral arteries

Vascular Access
- Demonstrate image acquisition of peripheral veins/arteries

Anesthesiology. 2015 Sep;123(3):670–82

	IMAGE AREA	IMAGE ACQUISITION	PROBE
1	Heart	Parasternal Long Axis (PLAX)	Phased
2	Inferior Vena Cava	Subcostal	Phased
3	Lung	Anterior, Lateral, Posterior	Linear
4	Kidney	Longitudinal, Transverse	Curved
5	Bladder	Suprapubic	Curved
6	Dialysis Fistula	Longitudinal and Transverse	Linear

Johns Hopkins **Nephrology** fellowship

Semin Dial. 2018 Mar;31(2):154–162

LUS signs

Sign	Images	Description	Pathology
Sliding sign	Figure 2	Movement between the two layers of the pleura during normal respiration	Normal
A-lines	Figure 6	Hyperechoic horizontal lines parallel to pleural line occurring at regular intervals below the pleura Artefacts from reverberations between probe and pleura	Seen in normal lungs as well as pneumothorax and emphysematous lungs
B-lines	Figure 1	Hyperechoic artefacts that originate at the pleural line and extend from the probe to the edge of the screen, without fading and perpendicular to the pleural line Artefacts that occur when the interstitium and alveoli are thickened predominantly from becoming oedematous with fluid	Presence of three or more B-lines per intercostal space is evidence of interstitial fluid. If seen diffusely in two or more zones bilaterally is usually indicative of pulmonary oedema
Z-lines	-	Hyperechoic artefact that originates at and perpendicular to the pleural line but does not extend to the edge of the ultrasound window and are shorter, wider and less defined than B-lines	Normal or pneumothorax
V-lines (spine sign)	-	Fluid acts as an acoustic window to enable visualisation of the V-line of vertebral bodies and the posterior thoracic wall in a supine patient	Pleural fluid
E-lines	-	Comet tail artefacts that are superficial to the pleural line	Echogenic foreign bodies or subcutaneous emphysema
Stratosphere sign	Figure 2	The loss of lung sliding beneath the pleura	Pneumothorax
Liver sign (mirror sign)	Figure 4	Tissue similar in consistency to liver tissue seen on US	Lung consolidation absent in pleural effusion
Sea shore sign (M mode)	Figure 2	Pleura appears as horizontal lines and the underlying lung as grainy, making up the sea and sandy shore, respectively	Normal M mode appearance of lung
Bar code sign (M mode)	Figure 3	Bar code-like appearance throughout M mode	Pneumothorax

Systematic Review

TAKE-HOME MESSAGE

During emergency intubations, transtracheal ultrasonography can be used to assess endotracheal tube placement before confirmation with capnography.

Outcome Measure	Sensitivity (95% CI)	Specificity (95% CI)	Number of Studies (Number of Patients)
Pooled data	0.98 (0.97–0.99)	0.98 (0.95–0.99)	11 (969)
Emergency intubations	0.98 (0.97–0.99)	0.94 (0.86–0.98)	8 (713)

CI, Confidence interval.

Acquisition

DIAGNOSTIC HYPOTHESIS

	Pleural effusion suspected	PTX suspected	Increased lung density suspected
Patient position Probe selection & orientation Protocol selection Picture optimization	• Semisitting (or supine) • Low-frequency probe • Maintain postprocessing artifacts reduction algorithms • Start examination from lung bases; identify diaphragm and spine	• Ideally supine • If possible, high-frequency probe • Consider M-mode and Power Doppler • Identify least dependent zone	• Semisitting or supine • Low-frequency and high-frequency probes • If B-line pattern analysis, deactivate post-processing artifacts reduction algorithms • Complete lung examination (anterior, lateral, and posterior surfaces, bilaterally)

Interpretation

PLEURAL LINE INTERFACE

Fluid

Pleural effusion/ Hemothorax

- Size
- Fluid characteristics

A-line Pattern

Lung sliding? YES / NO
Lung pulse? YES / NO
Vertical artifact? YES / NO

- **PTX likely** → Lung point? YES → **PTX highly likely**
- **Normal lung density at pleural line**

Consider:
- PEEP effect/lung overinflation
- Lung pathology not reaching pleural line
- Early stages of lung pathology
- Performance of further tests

→ Diagnostic / Nondiagnostic

Increased Lung Density

- ***Increased lung weight*** (water, cells, pus, blood, proteins, connective tissue, lipids) ***and/or***
- ***Lung deflation***

B-line Pattern

Diffuse | **Focal**

Sonographic findings that may help in differential diagnosis
- B-lines distribution (homogeneous/nonhomogeneous distribution)
- B-lines "density" (B1 pattern; B2 pattern)
- Decreased lung sliding
- Decreased/increased lung pulse
- Gravity-dependent or -independent pattern
- Presence/absence of pleural line abnormalities
- Presence/absence of subpleural abnormalities (e.g., focal consolidations)

Solid

Large area of lung consolidation | **Small subpleural consolidation**

Sonographic findings that may help in differential diagnosis
- Distribution
- Detection of air bronchogram(s)
- Detection of fluid bronchogram(s)
- Vascular pattern within the consolidation

Anesthesiology 9 2017, Vol.127, 568–582

Interpretation

PLEURAL LINE INTERFACE

Fluid

Pleural effusion/ Hemothorax

- Size
- Fluid characteristics

A-line Pattern

Lung sliding? YES → NO
Lung pulse? YES → NO
Vertical artifact? YES → NO

PTX likely

Lung point? YES

PTX highly likely

Normal lung density at pleural line

Consider:

- PEEP effect/lung overinflation
- Lung pathology not reaching pleural line
- Early stages of lung pathology
- Performance of further tests

Increased Lung Density

- ***Increased lung weight*** (water, cells, pus, blood, proteins, connective tissue, lipids) ***and/or***
- ***Lung deflation***

B-line Pattern

Diffuse | **Focal**

Sonographic findings that may help in differential diagnosis

- B-lines distribution (homogeneous/nonhomogeneous distribution)
- B-lines "density" (B1 pattern; B2 pattern)
- Decreased lung sliding
- Decreased/increased lung pulse
- Gravity-dependent or -independent pattern
- Presence/absence of pleural line abnormalities
- Presence/absence of subpleural abnormalities (e.g., focal consolidations)

Solid

Large area of lung consolidation | **Small subpleural consolidation**

Sonographic findings that may help in differential diagnosis

- Distribution
- Detection of air bronchogram(s)
- Detection of fluid bronchogram(s)
- Vascular pattern within the consolidation

Diagnostic | **Nondiagnostic**

Differential diagnosis

Fluid	A-line Pattern	Normal lung density at pleural line	B-line Pattern	Solid
• Transudate • Exudate • Hemothorax • Empyema	• PTX • Bullous disease • Lung overinflation (e.g., COPD, mechanical ventilation) • Pleural adhesions • Bronchial obstruction			

AIR CONTENT ↑

- Asthma exacerbation
- COPD exacerbation
- Pulmonary embolism
- Infectious/neoplastic process without pleural line involvement
- Lung overinflation (e.g., COPD, mechanical ventilation)
- Bronchial obstruction (early)
- Metabolic or neurologic causes

- Cardiogenic (hydrostatic) pulmonary edema
- Nonhydrostatic pulmonary edema (e.g., ARDS)
- Infection
- Pneumonitis
- Idiopathic interstitial pneumonias and other ILDs
- Alveolar hemorrhage
- Alveolar proteinosis
- Normal pattern (if isolated at lung bases)

- Lung consolidation
- Pulmonary infarct
- Pulmonary contusion
- Atelectasis (compression or obstruction)
- Primary lung cancer/tumor or metastasis

LUNG DENSITY →

Medical Decision-making

- Integration with clinical context (pretest probability)
- Consistency or inconsistency of findings with pretest diagnostic hypothesis
- LUS diagnostic or nondiagnostic
- Changes in diagnostic and therapeutic approach

Anesthesiology 9 2017, Vol.127, 568–582
